Energy policy

Management commitments

To meet applicable legal and other requirements related to energy efficiency, energy use, and energy consumption.

To continually improve its energy performance and its Energy Management System (EnMS).

To ensure the availability of information and provide the necessary resources (human, technical, and financial) to achieve its energy objectives and targets.

To ensure clear and regular communication on its energy policy and energy performance.

To train and raise awareness among employees regarding energy issues and best practices.

To promote the purchase of energy-efficient products and services that have an impact on its energy performance.

To promote design activities that take into account the improvement of its energy performance.

Objective	Target	Action plan
Reduce electricity consumption in production.	Reduce plastic production consumption by 3%	Generalize the use of automatic shutdown processes
	Reduce cleanroom consumption by 5%	Installation of VSDs on the fans
	Reduce air compressor consumption by 5%	Installation of controlled valves
	Reduce the impact of the chiller and its consumption by 5%	Replacement of the refrigerant
Reduce electricity consumption for tertiary uses.	Reduce heating/cooling-related consumption by 2%	Installation of double-glazed openings
	Reduce lighting-related consumption by 0.5%	Installation of motion detectors
	Reduce store heating-related consumption by 10%	Installation of destratifiers
	Reduce IT equipment consumption	Employee awareness-raising
